

ZUBEHÖR

Short time clock

The clock timer can manually activate individual irrigation stations on site. It is especially suitable to irrigate selected tennis courts without having to activate the controller. Length of irrigation can be set from 0 to 15 minutes. This clock timer can be used in combination with the PERROT controller WaterControl+SC

Rain stop / sensor

The MINICLIK is a "must-have" for all automatically controlled irrigation systems as it automatically stops the irrigation cycle when natural rain sets in thus preventing the ground from too much water. The MINICLIK is a NCC (normally closed contact) and is compatible with our controller WaterControl+SC. No program changes required. Automatic interruption and restart. The hygroscopic washers can be adjusted to the dryness of the ground due to variable ventilation. Irrigation programs are reactivated as soon as the washers are dry. The amount of precipitation can be set from 3 to 6 or 13 mm.

Key switch

For the manual start of a preset irrigation program on the controlling device WaterControl+SC from the sidelines. Generally for irrigation schedules before and after the match and during half-time for the quick irrigation of the field.
